MECHANISMS OF AGEING AND DEVELOPMENT

SUBJECT INDEX

Volume 42 (1988)

adrenergic innervation, ageing, autonomic nervous system, small intestine, image analysis, 147

adrenergic system, hemodynamics, arterial system, 49

β -adrenoreceptor, asparagine-linked oligosaccharides, man-*P*-dol synthase, dolichol pathway, salivary gland, 173

ageing, autonomic nervous system, adrenergic innervation, small intestine, image analysis, 147

ageing, protein synthesis, protein breakdown, lung growth, dietary supply, 253

aging, Gompertz function, Weibull function, survival, 275

aging, culture, molluscs (*Lymnaea stagnalis*), disease, survival characteristics, 263

aging, dimethylaminoethanol, longevity, neoplasms, 129

aging, erythrocyte viability, mouse, 37

aging, hemopoiesis, cell lines, maturation stages, circadian rhythms, seasonal differences, sinus function fitting, 91

aging, L-triiodothyronine, T3-sensitive hepatic and renal enzymes, malic enzyme, α -glycerophosphate dehydrogenase enzyme, 229

aging, neurons, lipofuscin granules, colchicine, lysosomes, organelle redistribution, 63

aging, pituitary, tumor incidence, immunocytochemistry, 115

aging, prolactin, immunochemistry, 75

aging, sympathetic neurons, autonomic nervous system, morphometrics, image analysis, 139

aging, T lymphocytes, T cell activation, monoclonal antibodies, T lymphocyte precursors, 27

aging of W1-38, media variations, 215

Alzheimer's disease, olfactory bulbs, senile plaques, neurofibrillary tangles, 1

arterial system, hemodynamics, adrenergic system, 49

asparagine-linked oligosaccharides, man-*P*-dol synthase, dolichol pathway, salivary gland, β -adrenoreceptor, 173

(Na/K)-ATPase, hepatocyte, insulin, plasma membrane, tyrosine aminotransferase, 17

autonomic nervous system, ageing, adrenergic innervation, small intestine, image analysis, 147

autonomic nervous system, sympathetic neurons, aging, morphometrics, image analysis, 139

cellular aging, human fibroblast, cell surface-charge, cell electrophoresis, 183

cell electrophoresis, human fibroblast, cell surface-charge, cellular aging, 183

cell lines, aging, hemopoiesis, maturation stages, circadian rhythms, seasonal differences, sinus function fitting, 91

cell proliferation, rat, old and young sera, rat fibroblasts, human fibroblasts, 159

cell surface-charge, human fibroblast, cell electrophoresis, cellular aging, 183

chick embryo liver, hydrocortisone, development, thymidine kinase, 239

circadian rhythms, aging, hemopoiesis, cell lines, maturation stages, seasonal differences, sinus function fitting, 91

colchicine, aging, neurons, lipofuscin granules, lysosomes, organelle redistribution, 63

Gompertz function, Weibull function, survival, aging, 275

culture, molluscs (*Lymnaea stagnalis*), aging, disease, survival characteristics, 263

development, hydrocortisone, chick embryo liver, thymidine kinase, 239

dietary supply, protein synthesis, protein breakdown, lung growth, ageing, 253

dimethylaminoethanol, aging, longevity, neoplasms, 129

disease, culture, molluscs (*Lymnaea stagnalis*), aging, survival characteristics, 263

dolichol pathway, asparagine-linked oligosaccharides, man-*P*-dol synthase, salivary gland, β -adrenoreceptor, 173

erythrocyte viability, aging, mouse, 37

Gompertzian mortality rate distribution, thermodynamical and biological interpretation, programmed longevity concept, 197

hemodynamics, arterial system, adrenergic system, 49

hemopoiesis, aging, cell lines, maturation stages, circadian rhythms, seasonal differences, sinus function fitting, 91

hepatocyte, insulin, plasma membrane, (Na/K)-ATPase, tyrosine aminotransferase, 17

human fibroblast, cell surface-charge, cell electrophoresis, cellular aging, 183

human fibroblasts, rat, old and young sera, cell proliferation, rat fibroblasts, 159

human muscle, phosphorus magnetic resonance spectroscopy, *in vivo* studies, phosphodiesters, 105

hydrocortisone, chick embryo liver, development, thymidine kinase, 239

image analysis, ageing, autonomic nervous system, adrenergic innervation, small intestine, 147

image analysis, sympathetic neurons, aging, autonomic nervous system, morphometrics, 139

immunochemistry, prolactin, aging, 75

immunocytochemistry, pituitary, aging, tumor incidence, 115

insulin, hepatocyte, plasma membrane, (Na/K)-ATPase, tyrosine aminotransferase, 17

in vivo studies, phosphorus magnetic resonance spectroscopy, human muscle, phosphodiesters, 105

L-triiodothyronine, aging, T3-sensitive hepatic and renal enzymes, malic enzyme, α -glycerophosphate dehydrogenase enzyme, 229

lipofuscin granules, aging, neurons, colchicine, lysosomes, organelle redistribution, 63

longevity, dimethylaminoethanol, aging, neoplasms, 129

lung growth, protein synthesis, protein breakdown, ageing, dietary supply, 253

lysosomes, aging, neurons, lipofuscin granules, colchicine, organelle redistribution, 63

malic enzyme, aging, L-triiodothyronine, T3-sensitive hepatic and renal enzymes, α -glycerophosphate dehydrogenase enzyme, 229

man-*P*-dol synthase, asparagine-linked oligosaccharides, dolichol pathway, salivary gland, β -adrenoreceptor, 173

maturation stages, aging, hemopoiesis, cell lines, circadian rhythms, seasonal differences, sinus function fitting, 91

media variations, aging of W1-38, 215

molluscs (*Lymnaea stagnalis*), culture, aging, disease, survival characteristics, 263

monoclonal antibodies, aging, T lymphocytes, T cell activation, T lymphocyte precursors, 27

morphometrics, sympathetic neurons, aging, autonomic nervous system, image analysis, 139

mouse, aging, erythrocyte viability, 37

neoplasms, dimethylaminoethanol, aging, longevity, 129

neurofibrillary tangles, Alzheimer's disease, olfactory bulbs, senile plaques, 1

neurons, aging, lipofuscin granules, colchicine, lysosomes, organelle redistribution, 63

old and young sera, rat, cell proliferation, rat fibroblasts, human fibroblasts, 159

olfactory bulbs, Alzheimer's disease, senile plaques, neurofibrillary tangles, 1

organelle redistribution, aging, neurons, lipofuscin granules, colchicine, lysosomes, 63

phosphodiesters, phosphorus magnetic resonance spectroscopy, *in vivo* studies, human muscle, 105

phosphorus magnetic resonance spectroscopy, *in vivo* studies, human muscle, phosphodiesters, 105

pituitary, aging, tumor incidence, immunocytochemistry, 115

plasma membrane, hepatocyte, insulin, (Na/K)-ATPase, tyrosine aminotransferase, 17

programmed longevity concept, Gompertzian mortality rate distribution, thermodynamical and biological interpretation, 197

prolactin, aging, immunochemistry, 75

protein breakdown, protein synthesis, lung growth, ageing, dietary supply, 253

protein synthesis, protein breakdown, lung growth, ageing, dietary supply, 253

rat, old and young sera, cell proliferation, rat fibroblasts, human fibroblasts, 159

rat fibroblasts, rat, old and young sera, cell proliferation, human fibroblasts, 159

salivary gland, asparagine-linked oligosaccharides, man-*P*-dol synthase, dolichol pathway, β -adrenoreceptor, 173

seasonal differences, aging, hemopoiesis, cell lines, maturation stages, circadian rhythms, sinus function fitting, 91

senile plaques, Alzheimer's disease, olfactory bulbs, neurofibrillary tangles, 1

sinus function fitting, aging, hemopoiesis, cell lines, maturation stages, circadian rhythms, seasonal differences, 91

small intestine, ageing, autonomic nervous system, adrenergic innervation, image analysis, 147

survival, Gompertz function, Weibull function, aging, 275

survival characteristics, culture, molluscs (*Lymnaea stagnalis*), aging, disease, 263

sympathetic neurons, aging, autonomic nervous system, morphometrics, image analysis, 139

T3-sensitive hepatic and renal enzymes, aging, L-triiodothyronine, malic enzyme, α -glycerophosphate dehydrogenase enzyme, 229

thermodynamical and biological interpretation, Gompertzian mortality rate distribution, programmed longevity concept, 197

thymidine kinase, hydrocortisone, chick embryo liver, development, 239

tumor incidence, pituitary, aging, immunocytochemistry, 115

tyrosine aminotransferase, hepatocyte, insulin, plasma membrane, (Na/K)-ATPase, 17

T cell activation, aging, T lymphocytes, monoclonal antibodies, T lymphocyte precursors, 27

T lymphocytes, aging, T cell activation, monoclonal antibodies, T lymphocyte precursors, 27

T lymphocyte precursors, aging, T lymphocytes, T cell activation, monoclonal antibodies, 27

Weibull function, Gompertz function, survival, aging, 275

α -glycerophosphate dehydrogenase enzyme, aging, L-triiodothyronine, T3-sensitive hepatic and renal enzymes, malic enzyme, 229
